Art Unit: 2836

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dick (3,671,814) in view of Moran et al. (5,784,244).

Dick discloses a solenoid system comprising an armature (4), a yoke (3) and a coil (2) interacting with the yoke to move the armature. Sensors detect actual values of drive-specific switching parameters wherein when a flux threshold is reached, the control device controls the coil current. See Col. 1, lines 60-71, Col. 4, lines 14-22; 60-64 and Col. 5, line 73 through Col. 6, line 27. Dick

Art Unit: 2836

does not specifically disclose that the solenoid system is for a switchgear application. However, Moran et al. teach the use of solenoid systems for switchgears. Therefore, it would have been obvious to utilize the disclosure of Dick in any solenoid system application, such as, a switchgear application, so as to be able to precisely control switchgear operation with a simple and light-weight structure which is adapted to generate a relatively large distance-independent linear force and with which the magnitude and the direction of the force may be altered in a rapid manner. This flux-detecting control scheme allows the avoidance of large and heavy solenoids having higher current consumption while obtaining larger armature forces.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
